GREENHECK
Building Value in Air.

November
2014

The Gravity Intake and Relief ventilators are non-powered and work on pressure differential between the inside and outside of the building.

Fabra Hood

4

Designed for intake or relief applications, the Fabra Hood models FGI or FGR offer many important advantages over other gravity roof ventilators. It is superior in load bearing strength, weather-resistance, dimensional flexibility and appearance.

Models FGI and FGR	4-7
Dimensions and Performance Data	8-13

Spun Aluminum

14

For natural gravity or positive pressure systems, intake model GRSI or relief model GRSR, offers excellent performance and durability. Featuring an exceptional low silhouette design and rugged construction this model is both efficient and economical.

Model GRSI and GRSR	14
Dimensions and Performance Data	14-15

Louvered Penthouse

16

The WIH intake or WRH relief penthouse units offer an aesthetically pleasing design. This flexible design allows for units to be shipped in pre-assembled sections that can be easily assembled without special tools.

Models WIH and WRH	16
Dimensions and Performance Data	16-17

Upblast Ventilator

18

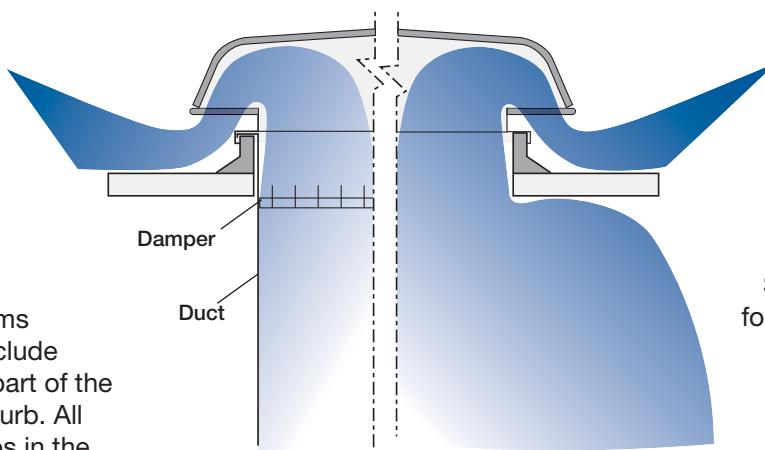

Model RGU is designed for use as an outlet on vertical high velocity exhaust systems. The RGU can be furnished with or without the curb cap for mounting directly on round stacks.

Model RGU	18
Dimensions and Performance Data	18
All Ventilator Specifications	19
Greenheck Services	20

Model Comparison

Model	Intake	Relief	Performance	
			Maximum Volume (cfm)	Maximum Static Pressure (in. wg)
GRSI	✓		15,200	0.4
GRSR		✓	18,400	0.4
FGI	✓		109,800	0.4
FGR		✓	96,800	0.3
WIH	✓		50,000	0.2
WRH		✓	60,000	0.2
RGU		✓	60,000	0.5

System Resistance

Ducted Systems

Static pressure drops shown for ducted systems in this catalog do not include pressure drops for any part of the system below the roof curb. All additional pressure drops in the ducted system must be calculated by the system designer.

Performance Data

Performance data shown on models include static pressure drops for both ducted and non-ducted systems. Pressure drop values as shown are lower for ducted systems than for non-ducted systems. The non-ducted pressure drop includes the sudden expansion at the throat for intake and sudden contraction loss at the throat for exhaust. These losses are not present when a duct is attached to the throat. In calculating total system

Non-ducted Systems

Static pressure drops shown for non-ducted systems in this catalog include all entrance and discharge losses.

resistance for ducted systems, it is necessary to add the pressure drop values shown to the combined total of the other losses in the system. A damper installed in either a ducted or non-ducted system will also require that an additional pressure drop value be included. Where insect screens or filters are installed, the static pressure drops shown on page 6 should be included in system resistance calculations in lieu of standard catalogued pressure drops.

Fabra Hood Models FGI/FGR

Fabra Hoods are designed for intake (model FGI) or relief (model FGR) applications. The Fabra Hood design offers many important advantages not found in other gravity roof ventilators. It's design is superior in appearance, load-bearing strength, weather-resistance and dimensional flexibility.

Appearance

The clean lines and uniform structural design of the Fabra Hood complement any building's appearance. The Fabra Hood is designed with a low profile to mount close to the roof line. The result is minimum impact on the building silhouette.

Strength and Weather-Resistance

These hoods are strong enough to handle the snow loads found in even the harshest of northern climates and they have proven their ruggedness. The key to the Fabra Hood's strength and rigidity is in the design of the arched hood panels. Each panel provides its own structural support and is formed with interlocking edges. The result is a strong, rigid shell without the obstruction and performance losses of excessive internal support braces. The interlocking ribs also create tight, weather-resistant joints. No caulking or caps are required to seal out rain and snow.

Third Party Certified for High Wind

Miami-Dade, Notice of Acceptance (NOA) - 14-0513.10
Florida Product Approval (FLPA) - FL12917

Maximum High Wind Certifications Sizes		
Model	Throat Diameter	
	Width inches (mm)	Length inches (mm)
FGI	54 (1372)	54 (1372)
FGR	66 (1676)	66 (1676)

- Highest industry rating
- Fabra Hoods are certified for static and cyclic wind loading and missile impact
- Designed to withstand wind loads of up to 150 mph (241 km/hr)
 - > No tie downs are needed
- Installation/mounting details are provided

Performance

The rounded inner surfaces of the Fabra Hood's arched panels promote a smooth, uninterrupted flow of air to reduce pressure losses. Cataloged performance data is assured through extensive air testing of both ducted and non-ducted installations with standard birdscreens in place. Intake and relief units differ in size and performance. It is important to note that the "free area" (the opening surrounding the throat) is larger for intake hoods. This larger free area (twice the area of the throat) limits the entry of airborne debris and moisture by creating lower intake air velocities. Since relief units are not affected by velocity considerations, free area is equal to throat area. Consequently, the smaller overall dimensions of relief units result in lower cost.

Broad Range of Sizes

Model FGI (intake) and FGR (relief) are available in throat sizes ranging from a minimum of 8 inches (203 mm) wide by 8 inches (203 mm) long to a maximum of 72 inches (1829 mm) wide by 180 inches (4572 mm) long. The complete range of suggested throat sizes is shown on pages 8-13. Other sizes are also available in increments of one inch within the limits shown.

Shipping

Most Fabra Hoods ship assembled until they are too large to fit in a semitrailer. See page 8-13 for specific dimensional data.

Assembly

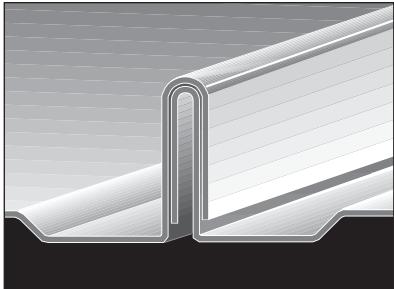

With the Fabra Hood's interlocking rib design, hoods of long lengths can be constructed on the jobsite. Where the appearance of a single unit is desired, large roof openings can be covered using a single hood. This also represents a cost savings in working with a single roof penetration. Neither special tools nor training are required for assembly. See page 7 for details.

Fabra Hood Construction Features

Precision Formed Locking Rib System

Strength, weather tightness and adjustable lengths are the primary advantages of the Fabra Hood's arched, interlocking hood panels. A single precision roll forming operation creates the rib, the adjacent channel and the arch. All three features work in combination for rigidity and efficient water drainage.

Fabra Hoods are available with hood panels and bases constructed of aluminum or galvanized steel as specified.

1 Hood panels

Panels are arched and precision roll formed for strength and weather tightness. The design and construction provides sufficient structural strength to allow inlet and outlet areas to be virtually unobstructed by support members.

2 Birdscreens

Standard birdscreens are constructed of 1/2-inch (13 mm) galvanized steel mesh for minimum restriction of airflow.

3 Support members

Heavy-gauge galvanized steel support members provide additional structural strength as well as a hood/base interface. On larger hoods, truss braces are added for increased strength.

Accessibility

Fabra Hoods are designed for ease of access to allow inspection and maintenance of screens, filters and dampers. There are two options for opening the hood:

1. Completely lift the hood off the base by removing the bolts on all the support members.
2. Hinged hood action allows the hood to swing up and over to lie on the roof deck by removing the end bolts on only one side of the support member.

NOTE: For safety, it is not recommended to use this hinging function with larger hoods or to prop any hood part way open. Care should be taken to avoid handling an unbolted hood in strong winds, especially with larger size units.

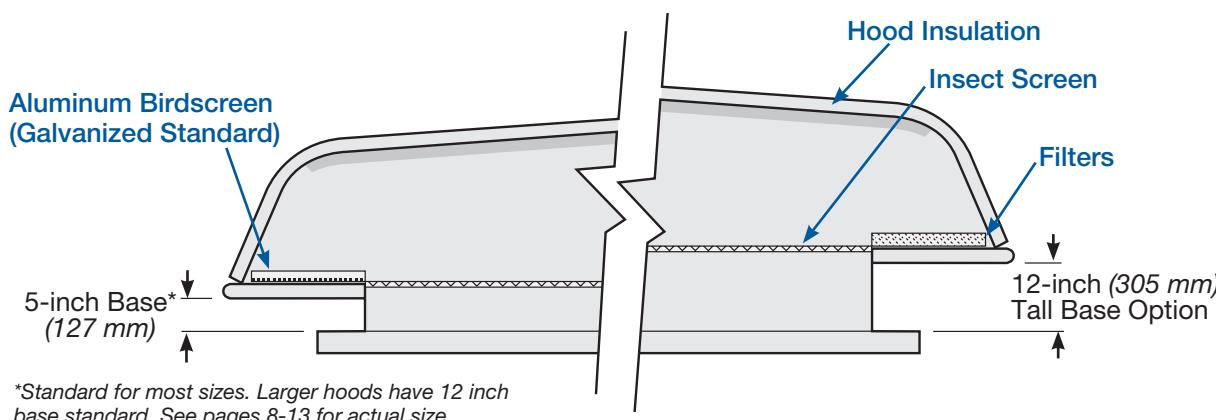

4 Standard base

Standard base height is 5 inches (127 mm) for most sizes. Bases include prepunched mounting holes for ease of installation. The curb cap is 6 inches (152 mm) larger than the throat size to minimize airflow restrictions. Reinforced steel hood support members are securely attached to the base and direct hood loads to the roof curb. 12 inch (305 mm) bases are optional. See page 6 for details.

5 Vertical end panels

Vertical panels are fully locked into the hood end panels.

Fabra Hood Construction Options

12-inch tall bases

12-inch (305 mm) bases are recommended for intake applications to prevent moisture entry and for all applications where rain or snow may accumulate on the roof deck. On larger size units, a 12-inch (305 mm) base will provide more clearance space from the roof deck and allow for better airflow.

Fiberglass hood insulation

Either 1/2-inch (13 mm) or 1-inch (25 mm) insulation can be factory applied to the underside of the hood to prevent condensation. Insulation is also factory applied to individual panels of large unassembled units.

Aluminum birdscreen

¾ x 1¼ inch (19 mm x 32 mm) diamond shape is available in lieu of standard galvanized birdscreen.

Tie-down points

Heavy-gauge galvanized steel tie-down points are available as cable attachment points at the ends of each hood support rail and prevent damage to the Fabra Hood in locations where unusually strong winds occur.

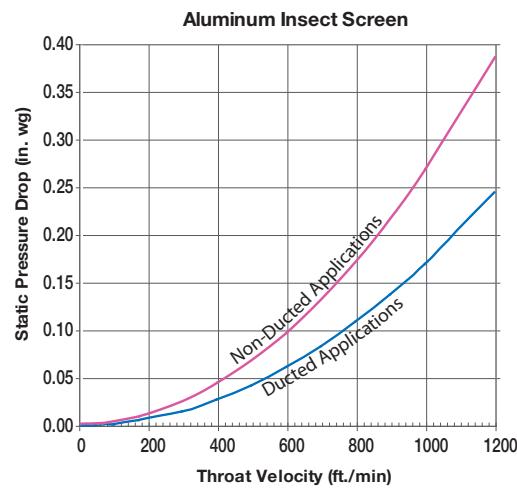

Special coatings

Several options are available for decorative or protective purposes.

- Factory **primed** for field application of final finish.
- **Baked enamel** finish is applied to exterior surfaces only to match or complement a building's color.
- Protective coatings that include Greenheck's **Permatector™** (a thermosetting polyester urethane) are also available. Protective coatings are applied to all surfaces. Refer to the Performance Coatings catalog for complete coating options.

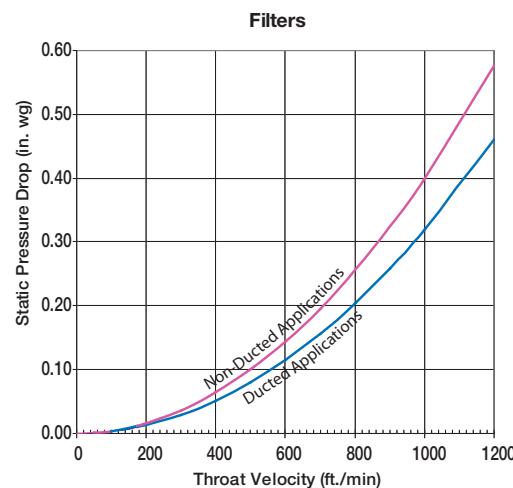

Aluminum Insect Screen

A fine mesh aluminum insect screen tightly fitted to the top of the throat, is available to prevent the entry of insects. (This is in addition to the standard birdscreen and is available on factory assembled units only.) Use the curves on the graph below to determine the static pressure drop for units with insect screen.

Filters

Two-inch aluminum filters are available on model FGI (intake) for applications where foreign material must be removed from the airstream. Use the curves on the graph below to determine the static pressure drop for units with filters.

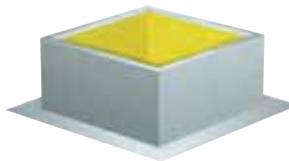

Fabra Hood Accessories

Backdraft Dampers

Backdraft dampers are available for intake or relief with either gravity or motorized operation. Motorized dampers are recommended for all intake or low velocity relief applications. Damper sizes are the same as throat sizes.

Roof Curbs

Prefabricated roof curbs ensure compatibility between the gravity ventilator, curb and roof opening. Curb extensions are also available. Curb models are available to meet a wide range of applications and varying roof architecture and construction. See the Greenheck Roof Curbs, Extensions and Equipment Supports catalog for complete details on these products.

On-Site Assembly

Flexibility is a primary feature of the Fabra Hood design. Interlocking hood panels and extendible throats allow units to be constructed to long lengths. On-site assembly for these larger units is not difficult and actually offers several advantages.

For jobs with large throat sizes, assembling hoods on-site reduces costs. There is a cost savings in carrying unassembled components to the roof versus the expense of cranes or other equipment involved in lifting a bulky assembled unit. The risk of damage in transporting large assembled units is also reduced when they are assembled on the roof deck.

In addition, the space saved by a compact crate of knocked-down component parts reduces shipping charges and final costs over large, fully assembled units.

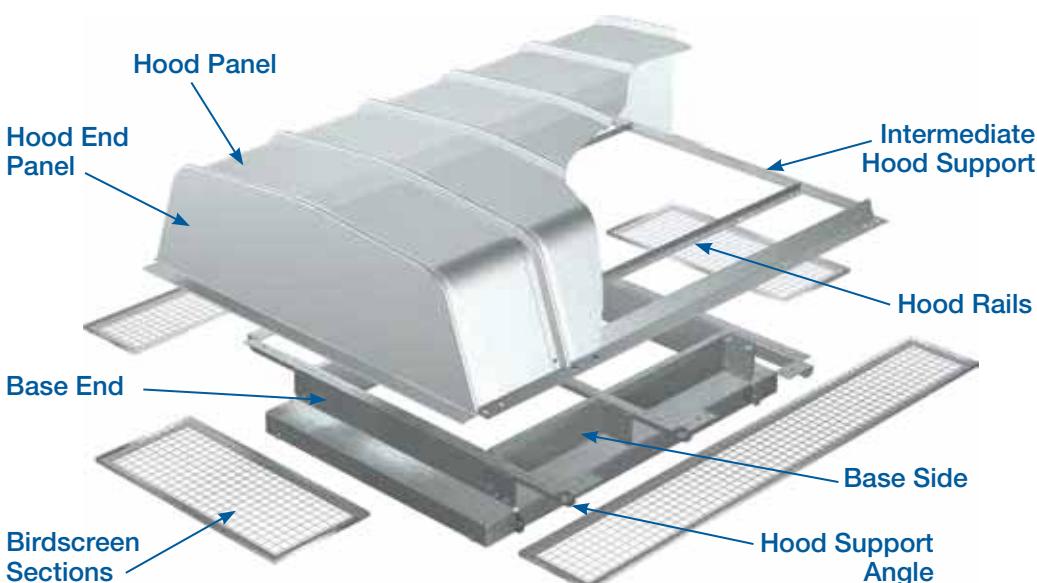

Ease of Assembly

Hoods of any length can be easily constructed on the jobsite. No special tools or training are required to assemble a Greenheck Fabra Hood.

Fabra Hoods are assembled with the following basic steps:

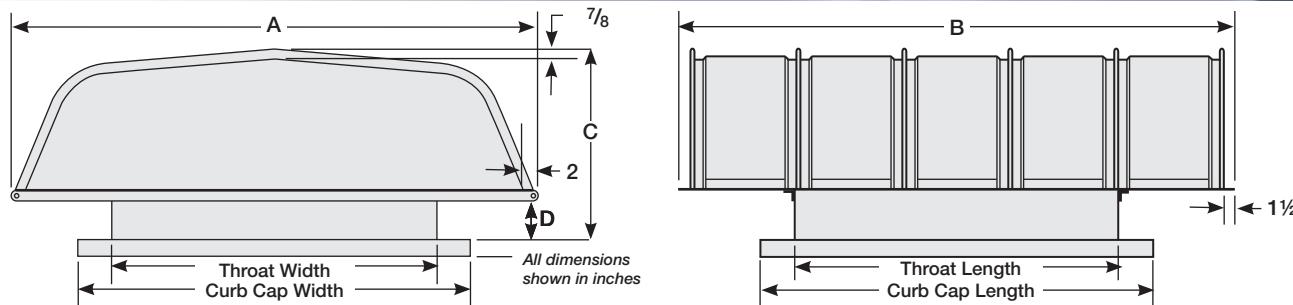

- Step 1**—Base ends, base sides and intermediate hood supports (when required) are placed in position and bolted together.
- Step 2**—Hood support angles are attached.
- Step 3**—All fasteners are tightened and all inside base corners are caulked.
- Step 4**—Birdscreens are attached to hood support angles.
- Step 5**—Hood rails are attached to hood support angles.
- Step 6**—Hood panels and end panels are assembled to hood rails.

All hardware is provided with each unit along with complete, detailed and well illustrated instructions.

Spun Aluminum Model GRSI/GRSR/GRSF

Construction Features

When you buy a Greenheck Gravity Ventilator, you receive a ventilator with the industry's best performance and durability for intake (model GRSI) or relief (model GRSR) for natural gravity or positive pressure systems. Exceptional low silhouette design and construction features make this unit a rugged, efficient and economical air inlet or outlet.

- Broadest performance in the industry, up to 18,400 cfm (31,300 m³/hr)
- Most advanced weather protection of any ventilator in its class
- Greenheck subjects these products to extensive life testing, assuring the ventilator will provide years of reliable performance

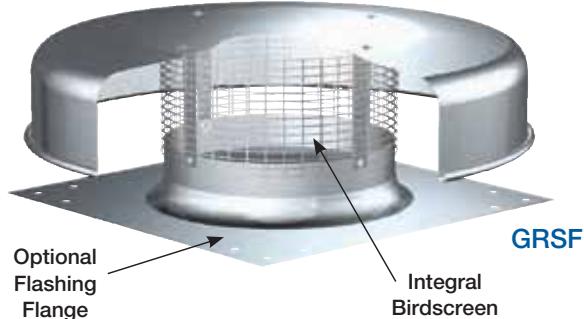

- All aluminum exterior for corrosion-resistant construction
- Integral birdscreen to prevent entry of birds and/or small objects
- Built-in curb cap with prepunched holes for easy attachment to roof curbs
- Optional built-in flashing flange (model GRSF) with prepunched holes for quick and easy installations without a roof curb.

The GRS can be used with the following accessories:

Gravity or motorized dampers to assure weather tightness.

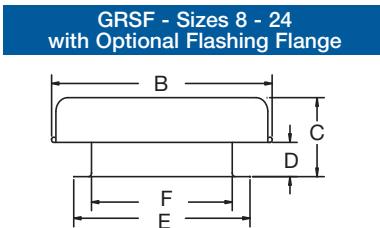

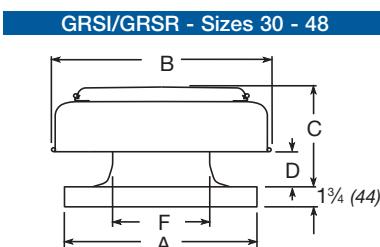

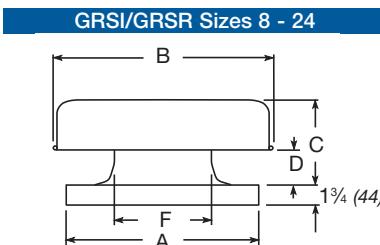

Prefab curbs to reduce installation time.

Protective coatings to extend the life of the unit or blend its color with other equipment.

Dimensions										
Model Size	A	B	C	D	E	F	Damper Size	Curb Thickness	Shroud Thickness	Unit Weight

48	58 (1473)	72 (1829)	26¼ (667)	6½ (165)	-	48½ (1232)	48 x 48 (1219 x 1219)	0.064 (1.6)	0.080 (2.0)	80 (36)

All dimensions in inches (millimeters) and the weight in pounds (kilograms). NOTE: Sizes GRS-8 through 24 have a one-piece cover and shroud. Access is gained through the removal of screws. Sizes GRS-30 through 48 have a removable cover, separate from the shroud, to facilitate maintenance and servicing of dampers.

Spun Aluminum Model GRSI/GRSR

Performance

Performance data for these units was obtained through actual testing. The information is presented in capacity versus total pressure drop through the GRS. Total pressure drop includes the static and velocity pressure drops. To find the static drop alone, use the following equations.

$$\text{Throat Velocity} = \left[\frac{\text{CFM}}{\text{Throat Area}} \right]$$

$$\text{Static Pressure} = \left[\frac{\text{Total Pressure}}{\text{Velocity Pressure}} \right] - \left[\frac{\text{Velocity Pressure}}{\text{Velocity Pressure}} \right]$$

$$\text{Velocity Pressure (in. wg)*} = \left[\frac{\text{Throat Velocity}^2}{4008.6} \right]$$

*1 inch wg = 249 Pa

The data is presented for both discharge and intake units. The intake velocity of the intake unit should not exceed 600 feet per minute. Above this velocity, airborne particles may be carried into the building. The table below displays the maximum recommended values for the respective intake units. In areas where snow depths may be a problem, 12 inch (305 mm) or higher curbs are recommended.

		Volume (CFM)											Recommended Maximum Intake Capacities	
		GRSI Size	Throat Area (ft ²)	Total Pressure Drop (in. wg)									Intake Area (ft ²)	Max. CFM Intake

Louvered Penthouse Models WIH/WRH

Building Value in Air.

DIMENSIONAL DRAWING FOR CHARTS

Greenheck designs penthouse units for aesthetically pleasing gravity intake or relief applications.

- Clean horizontal lines blend perfectly with modern architecture.
- The special louver design results in low pressure drops, low hood heights and maintains maximum weather resistance.
- All-aluminum construction assures lasting durability and appearance.
- The removable cover is equipped with insulation to prevent condensation.

The flexible design of the WIH (intake) and WRH (relief) allow the units to be shipped in pre-assembled sections. These sections are easy to assemble on the jobsite without special tools. All required fasteners and complete assembly instructions are shipped with each unit.

Options include a variety of bird and insect screens, dampers, roof curbs, special finishes and factory assembled based on shipping limitations.

Use these tables for specific product dimensions

Dimensional & Performance Data					Intake (WIH) Volume (cfm)						Relief (WRH) Volume (cfm)

*Total pressure drop includes velocity pressure losses at outlet of throat but does not include birdscreen loss.

Increase the total pressure drop with a 1.15 multiplier to allow for birdscreen pressure drop.

Louvered Penthouse Models WIH/WRH

Building Value in Air.

Construction Features

Weathershield

The interior vertical edge of the curb cap forms the throat and weathershield. Each corner is also shielded to prevent leakage.

The louvers are mounted 4 inches from the roof opening for added weather protection.

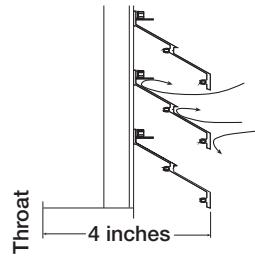

Multi-section hood covers

Covers hinge open for easy access.

Weather Resistant Louver Blades

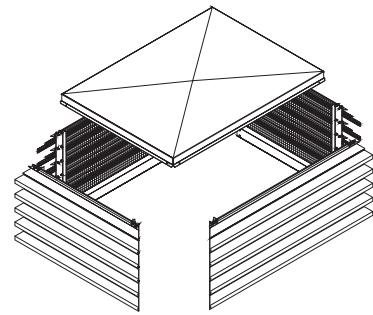

Each unit features weather resistant aluminum louver blades with mitered corners. The sturdy extruded aluminum louver blade has a material thickness of 0.080 inches.

Assembled Sides and Cover

The unit is made into four side sections and a reinforced cover. A factory assembled side consists of the curb cap, vertical supports, and the quantity of louvers required for the specified height.

The sides are joined at the four corners by stainless steel screws in each louver. These screws are countersunk to maintain the appearance of the mitered corner. The cover is securely fastened to the unit by stainless steel fasteners.

Note: For other sizes please consult factory

Upblast Ventilator Model RGU

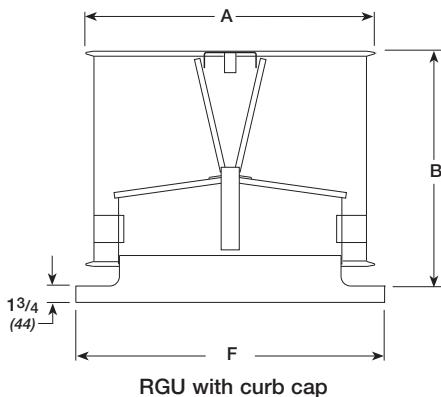

GREENHECK
Building Value in Air.

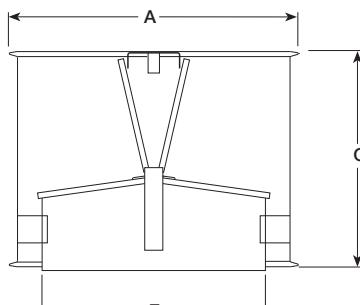

Model RGU is designed for use as a weatherproof outlet on vertical high velocity exhaust systems and can be furnished without the curb cap to allow for direct mounting on round stacks.

Standard construction is heavy-gauge galvanized steel. Nine sizes are available, corresponding to powered units in sizes 18-60.

Fusible link damper lifters are available to allow the RGU units to function as heat and smoke relief vents.

RGU with curb cap

RGU without curb cap

Specifications

Fabra Hood - FGI/FGR

Gravity roof ventilators shall be constructed of heavy-gauge aluminum or galvanized steel as specified.

Hoods shall be constructed of precision formed, arched panels with interlocking seams.

Bases shall be constructed so that the curb cap is 6 inches (152 mm) larger than the throat size.

Standard base height shall be 5 inches (127 mm) for most sizes. Optional 12-inch (305 mm) bases shall be furnished as specified for intake applications to restrict entry of moisture and for all applications where rain and/or snow may accumulate on the roof deck.

Hood support members shall be constructed of galvanized steel and fastened so that the hood can be either removed completely from the base or hinged open.

Birdscreens constructed of 1/2-inch (13 mm) galvanized steel mesh shall be mounted horizontally across the intake/discharge area of the hood.

Gravity hoods shall be Fabra Hood model FGI for intake or model FGR for relief as manufactured by Greenheck Fan Corporation of Schofield, Wisconsin and/or in Rocklin, California, USA.

Spun Aluminum Gravity Roof Ventilator - GRSI/GRSR

Exterior construction shall be heavy-gauge aluminum windband with a rolled bead.

Curb cap shall be constructed of heavy-gauge aluminum and includes a one-piece spun venturi.

Curb cap shall be prepunched for mounting.

Internal components shall be constructed of rigid galvanized steel and include birdscreen.

Ventilator shall be models GRSI, GRSP or GRSP as manufactured by Greenheck Fan Corporation, Schofield, Wisconsin, USA.

Louvered Penthouse - WIH/WRH

Models WIH and WRH shall be low silhouette louvered penthouse units for intake or relief applications.

Construction shall be all-aluminum to assure lasting durability and appearance.

Unit shall have a removable aluminum cover for internal access and shall be lined with fiberglass insulation to prevent condensation.

Cover shall be securely fastened to the unit by corrosion-resistant fasteners.

Birdscreen shall be constructed of 1/2-inch (13 mm) mesh securely mounted across intake/relief openings.

Units shall feature a weather-resistant 0.080-inch (2 mm) aluminum louver with mitered corners.

Louvers shall be mounted 4 inches (102 mm) from the throat for maximum weather protection.

Louver design shall result in low pressure drops, low hood heights and maintain maximum weather resistance.

Louvered Penthouses shall be models WIH or WRH shall be manufactured by Greenheck Fan Corporation, in Schofield, Wisconsin and/or in Rocklin, California, USA.

Greenheck Services

Enjoy Greenheck's extraordinary service, before, during and after the sale.

Greenheck offers added value to our wide selection of top performing, energy-efficient products by providing several unique Greenheck service programs.

- Our **Quick Delivery** Program ensures shipment of our in-stock products within 24 hours of placing your order. Our **Quick Build** made-to-order products can be produced in 1-3-5-10-15 or 25-day production cycles, depending upon their complexity.
- Greenheck's free **Computer Aided Product Selection** program (CAPS), rated by many as the best in the industry, helps you conveniently and efficiently select the right products for the challenge at hand.
- Greenheck has been **Green** for a long time! Our energy-saving products and ongoing corporate commitment to sustainability can help you qualify for LEED credits.
- Our **3D service** allows you to download at no charge lightweight, easy-to-use AutoDesk® Revit® 3D drawings for many of our ventilation products.

Find out more about these special Greenheck services at greenheck.com

Building Value in Air

Greenheck delivers value to mechanical engineers by helping them solve virtually any air quality challenges their clients face with a comprehensive selection of

top quality, innovative air-related equipment. We offer extra value to contractors by providing easy-to-install, competitively priced, reliable products that arrive on time.

And building owners and occupants value the energy efficiency, low maintenance and quiet dependable operation they experience long after the construction project ends.

Our Commitment

As a result of our commitment to continuous improvement, Greenheck reserves the right to change specifications without notice.

Specific Greenheck product warranties are located on greenheck.com within the product area tabs and in the Library under Warranties.
